## HYDRAULIC MOTORS

IMPORTANT: Select a motor based on your tractor hydraulic output. This insures correct auger RPM and avoids extreme heat that can damage motor and tractor components. Recommended auger RPM is 430. See your implement dealer to verify the tractor pump pressure, GPM, and open or closed system before ordering a motor.

RECOMMENDATIONS: Use "H Series" motors for 6" TD-450 augers, all Truck Hoppers, 8" and 10" hydraulic hoppers, and all hydraulic Winches. Use "2000 Series" motors for 8" TD-450 augers and high horsepower situations.

Part No.	Description	Ship Wt.	Price
